

Plastic Surgeon Dr. Evan Ransom Now Performing Painless Facial Tightening and Scar Treatment Using INFINI RF and Zimmer Chiller

Double board-certified plastic surgeon Dr. Evan Ransom of San Francisco Center for Facial Plastic, Reconstructive & Laser Surgery now offers INFINI Radio Frequency skin tightening treatments with Zimmer Chiller. This distinctive combination of advanced technologies makes non-surgical facial tightening and scar treatment a virtually pain-free experience.

San Francisco, CA ([PRWEB](#)) October 12, 2016 -- Dr. Evan Ransom is a Double Board-Certified, Ivy League educated and fellowship-trained [Facial Plastic and Reconstructive Surgeon](#). He is the Director of the San Francisco Center for Facial Plastic, Reconstructive & Laser Surgery in California. While he offers a number of surgical cosmetic procedures for the face, Dr. Ransom also pursues the latest and most proven methods in [non-surgical facial rejuvenation](#). This includes the INFINI technology, an exclusive, minimally-invasive cosmetic treatment for skin tightening and acne scar reduction. The INFINI combines the use of radiofrequency energy (RF) and microneedling to stimulate collagen growth and tighten the skin. The [INFINI technology](#) offers valuable advantages in terms of effectiveness, with the ability to deliver calibrated energy directly to the dermis layer of the skin using tiny insulated micro-needles. It is a minimal downtime procedure.

While the benefits of INFINI RF skin tightening are remarkable, Dr. Ransom takes this non-surgical treatment one step further in terms of patient comfort and satisfaction. He has recently invested in the Zimmer Chiller to be used alongside the INFINI system, which allows patients to have a painless facial tightening or scar treatment procedure. The Zimmer Chiller is an advanced skin cooling system that can greatly reduce patient discomfort during laser skin treatments, injection therapy and microneedling procedures. It cools filtered air down to -30 degrees Celsius to provide maximum relief to the epidermis layer of the skin before, during and after the treatment.

“Achieving excellent aesthetic results is always a primary goal. However, if I can do it in a way that maximizes the comfort of my patients, it is ideal. The INFINI RF with Zimmer Chiller makes this possible,” says Dr. Ransom.

The INFINI RF with Zimmer Chiller can be used for patients who want to lift and tighten the cheeks, brow, eyelids, and neck. It is also a proven non-surgical treatment for acne scarring in patients with all skin types and colors.
